OFFICE MEMORANDUM

TO : CI/R&A/ []

FROM : CI/MRO

SUBJECT : Machine Listing of Overt Material
in RIS Machine Program

1. As discussed some time ago with you, and briefly on 11 January 1965 with Messrs. [] and [], you should prepare a draft request for the kind of listing you need. The query can be run against Q-1 OVERT, which would produce a listing of everything your people had input plus everything else from overt sources. A more precise query could be run against the appropriate document symbols in Q-2, perhaps following an initial run against OVERT. With present programming, as I understand it, it is not possible to sort out the overt material from other material on the same persons, i.e., to sort on record numbers identified with particular sources. This is a necessary part of our programming capability, particularly when liaison services become more direct contributors, and should be specified in our request.

2. Many of the names included in our overt machine input meet criteria for the RID main index, but it is obvious that the names have not been indexed against those overt materials. This matter should be discussed in your request, with the hope that Systems Group can provide the programming needed to produce index cards from the tape produced in response to your query. These cards should be in some form in which it would be possible to review them through comparison with the printout, and thus eliminate those which do not meet criteria. The cards should probably be in arbitrary number sequence, and might be handled in somewhat the same way that cards are handled in the delete-and-merge procedure.
